

S. Sivanantham

Full Stack web Developer (React.js, Node.js, MongoDB, MySQL)

curlysiva@gmail.com | +91-9384408622 | <https://www.linkedin.com/in/sivanantham-s-a344342b2/>

SUMMARY

I am a Full Stack MERN Developer with extensive experience in building scalable REST APIs with Node.js and Express, efficient database architecture with MongoDB and MySQL, and modern, responsive interfaces with React.js. My development approach focuses on performance, clean code, and maintainability by means of reusable components and modular architecture. Equipped with additional skills in data analysis and visualization using tools like Power BI, Tableau, Pandas, NumPy, and Matplotlib, I bridge the gap between software engineering and data insights by developing solutions that are functional and intelligence-

SKILLS

- | | |
|---|--------------------------------------|
| • Programming Language | JavaScript, Python |
| • Frontend Development | React.js, HTML, CSS |
| • Backend Development | Node.js, MySQL, MongoDB |
| • Data Analytics & Visualization | Power BI, Tableau, Excel |
| • Version Controller& Deployment | Git, GitHub, GitLab, Netlify, Render |

EXPERIENCE

Sakthi Infra Tex | Front Office Admin

Perundurai | 08.2020 – 11.2022

Managed auditing activities and front office operations, ensuring accurate reporting, monitoring staff performance and facilitating smooth communication between branches.

IDM Tech Park | Mern Stack Developer & Data Analyst

Erode | 02.2023 – 07.2024

Experienced in developing on MERN Stack technologies (MongoDB, Express.js, React.js, Node.js), focusing on building scalable and responsive web applications. Proficient in React.js, Javascript, Redux, HTML, CSS for enhancing UI/UX performance.

Developed RESTful APIs for efficient backend integration for seamless communication with databases like MongoDB and MySQL. Skilled in JWT authentication, API security best practices, and deployment on Vercel and Netlify.

Developed and maintained backend services using Node.js and MongoDB to support web applications. Integrated authentication, session management, and role-based access control for secure user experiences using Node.js and MongoDB.

Sogolsys, Coimbatore | Full Stack web Developer

Erode | 08.2024 – present

I worked at Segolsys, where I developed an internal office administration and lead-generation platform that helped heads of departments track new leads, manage staff activities, and generate reports in real time. I used MySQL for structured data and MongoDB for time-series information to ensure smooth, efficient performance. I also contributed to building a CRM system and helped create SegolConnect, which is an application similar to WhatsApp automation, designed to streamline communication and improve client engagement.

PROJECTS

Soolya – Plumber hiring platform

Designed and developed a plumber hiring platform using React.js, Node.js, and MongoDB with secure user authentication and role-based access control. Implemented robust authentication using JWT and bcryptjs, optimized the front-end with the use of reusable components, and made sure responsiveness was complete with Redux and Bootstrap. Gained practical experience in building scalable systems, improving UI/UX, and writing clean, maintainable code aligned with industry standards.

E-Commerce Website (Mern Stack)

Developed a full-stack e-commerce platform with user authentication, admin dashboard, and role-based access control and React.js, Node.js, and MongoDB. Implemented secure authentication (JWT, bcryptjs) and built a responsive UI with Redux and Bootstrap.

OpsSync Project (Mern Stack)

Developing a full-stack web application using Node.js and MongoDB that enables user-based access control, facilitates collaboration across multiple office branches and provides real time tracking of staff reports and work activities.

IPL Player prediction & Analysis (Data Analytics Project)

Link: https://github.com/sivanantham1998/Ipl_prediction_powerBI_dashboard

Analyzed IPL datasets (2008-2024) using Power BI, python and creating interactive visualizations for player performance, and team performance. Built custom dashboards for strategic insights and data driven decision-making.

BlinkIt Sales Analysis Project using Power-BI (Data Analytics Project)

Link: https://github.com/sivanantham1998/BlinkIt_powerBI_dashboard

BlinkIT Sales Data analysis using Power-BI, which can contain overall sales and performance of these current years. Built interactive dashboard for visualization of the over sales that regard the outlet size, outlet area and data's that are driven to make decision-making.

CRM Project (Full Stack Project)

SegolConnect is a customer-relationship and workflow-automation system I helped build to streamline the handling of leads, customer interactions, and daily operations in any business. It enables the generation and management of detailed user leads, the automation of messages to customers, notification of admins on upcoming actions, and performance tracking with interactive monthly growth charts. I contributed to creating reusable React components, integrating APIs, designing automation workflows, and optimizing MongoDB data structures, showcasing my strong grasp of real business logic, scalable architecture, and building tools that really improve team productivity.

ACHIEVEMENTS

Successfully lead and completed the Greeny Project as Project Head, ensuring meeting all organizational requirements.

Currently leading an ongoing project managing cross functional teams, coordinating tasks and smooth project execution

Recognized for string leadership team management and the ability to deliver projects with deadlines;

EDUCATION

Erode arts & science college | *Mca*

Erode, Tamilnadu | **Graduation (2020)**

Erode arts & science college | *B.Sc(Computer Science)*

Erode, Tamilnadu | **Graduation (2018)**

Additional Courses

- Data Analytics: Successfully completed data analytics, covering data visualization, Excel, MySQL, Power-BI, Tableau and Python.
